6 Tan Deal (to be used within 8 weeks) £80

MYLES EAST | 5 CADZOW PLACE | EDINBURGH | EH7 5SN | T: 0131 623 7333

Q1: Am I too fair to use self tanning products?

A1: All skin tones can benefit from a natural colour enhancement, however fair you are. The best tanning advice we can give is to choose a product that is specifically formulated for fair skin tones. WHITE to BROWN has a superb product, 8.5% will enhance your natural skin tone perfectly.

Q2: what do I wear during the tanning treatment?

A2: We provide disposable pants for you to wear during the treatment.

Q3: I do not want my tan very dark: Do you offer any products to suit a medium skin tone?

A3: The best tanning advice we can give is to choose a product that is specifically formulated for medium skin tones. WHITE to BROWN has a superb product, 10% will enhance your natural skin tone perfectly.

Q4: I love my tan to be really dark, which product would you recommend?

A4: Specifically formulated for dark tan lovers, WHITE to BROWN's 12.5% is your answer for a perfect deep bronzed tan.

Q5: I am getting married on a Saturday, when should I get my tan done?

A5: Thursday evening last thing would be the perfect time, we would be able to book you in as late as 7.30pm, this would allow you to then go home to bed from the salon so there is less chance of you having to wash hands or rubbing the tan etc. We would recommend testing this out prior to make sure you're happy with the results.

Q6: I worry that my tan may go orange?

A6: WHITE to BROWN's range of tanning products have been specifically created with a purple pigment (which is not visible), to suit everyone's individual skin tone, thus eliminating any orange undertones.

Q7: Does your products have that 'biscuity' smell associated with other tanning products?

A7: All tanning products contain DHA, the tanning ingredient that has a slight biscuity aroma. However, WHITE to BROWN has tempered this by adding a delicately fragranced ingredient which leaves your skin delicately scented.

Q8: How long does it take to work?

A8: The regular spray tan 8.5%, 10% & 12.5% needs 8-10 hours to develop. We recommended having this done in the evening so you can wash the following morning. We also offer White to BROWN Rapid Tan which develops in half the time but must be rinsed after 5 hours.

Q9: Will it stain my clothes and bed sheets?

A9: No it shouldn't but Ideally wear dark loose clothing after the tan and avoid crisp white bedding if concerned.

Q10: Will I be able to go out that night?

A10: With the spray tan you could leave it on and go out and look fine. You will feel slightly tacky after the tan so avoid any tight clothing

Q11: Can I get my tan done on the same day as my waxing?

A11: Generally we would recommend that you have your waxing done 24hrs before your tanning treatment. If you have not had waxing done before we would recommend that you have it done 2 days before tanning to allow time for any redness in the skin that may occur after the waxing to reduce.

Q12: Can I get my tanning done while I am pregnant?

A12: We are not aware of any legislation produced to say that it should not be done. Myles would not recommend that you get it done regularly throughout your pregnancy but for special occasions. Please consult your doctor or midwife.

Q13: I've never had a spray tan before and I have really sensitive skin, what would you recommend?

A13: We would recommend a patch test first with 10% Organic Spray Tan Solution from WHITE to BROWN

Q14: How long will my tan last?

A14: We would recommend exfoliating prior to tanning and treating the skin gently (no scrubbing) after the tan has been applied. Ideally use a moisturizer. Skin types may vary but WHITE to BROWN recommend a tan should last 5 days minimum.
